

The app starts with the following intro screen:

Please use responsibly.

OK

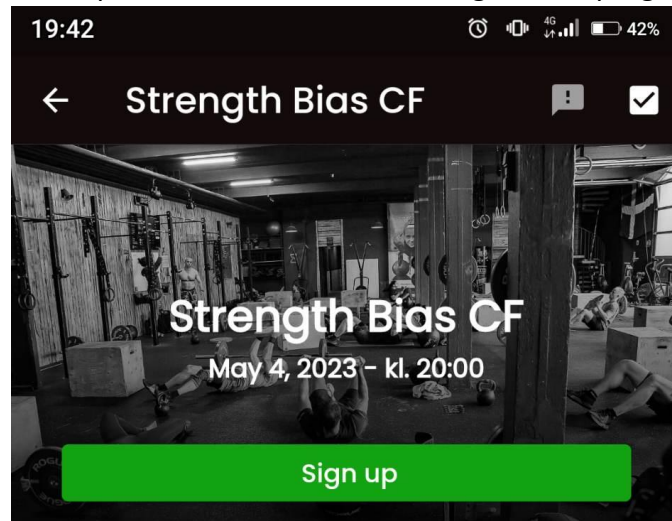

After clicking “OK”, the user is presented with the following interface:

When they select “Hide/decode”, that will open their files, so they can choose a picture to either hide into another picture or “decode” to reveal an already hidden picture.

“Hide into” will have them choose a picture, in which they would hide the first one.

For example- we will hide the following crossfit program:

Today's program

Strength Bias Thu W18

A. MAIN BLOCK

Every 3 minutes for 8 rounds:

4 front squats at 80%

4 strict press at 80%

10 dual DB bent over rows

B. CONDITIONING AMRAP in 5 minutes of:

10 push press (50/35)

5 bar facing burpees

C. ACCESSORY WORK

4 sets of 1 minute max distance front rack carry 2x24/16 KB)

Description

Into this photo of a girl walking in a forest:

After we click “hide”, the result will look like this:

When we click “save”, the resulting file will look like this:

If we click on “scale”, the image will shrink to fit the screen. We can save that lower resolution image through the “save” button as well.

When we go back to “hide/decode” and we select our encoded image, and then click “decode”, we will get the following result:
